                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
CC The invention relates to isolated nucleic acid molecules encoding CD109 CC polypeptides. These nucleic acid molecules include the human cDNA CC sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variants. CC CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 CC family of thioester-containing proteins. The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid, CC CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful CC for treating or detecting a disease or disorder, e.g. conditions CC associated with endothelial activation, platelet activation, activation of the complement system, quantitative or qualitative abnormalities CC and of the complement system, quantitative or qualitative abnormalities CC of platelet function, increased or impaired platelet aggregation and CC activation, increased or impaired activation of the coagulation or fibral activation of the coagulation and or CC of platelet systems, or impaired activation of the coagulation and/or CC controlytic systems, or impaired activation of the coagulation and/or CC activation, increased or impaired activation activation. These cc are also useful for treating cardiovascular disorders, stroke, myocardial cc infarction, thrombosis, embolism, peripheral vascular disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New CD109 nucleic acids and polypeptides, useful in gene therapy, particularly for treating strokes, myocardial infarctions, thrombosis, thrombocytopenia, autoimmune diseases, or organ or bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CD109; alpha2 macroglobulin; thioester; cerebroprotective; cardiant; immunosuppressive; haemostatic; anticoagulant; thrombolytic; human; cardiovascular; vasotropic; gene therapy; CD109 K15; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Fig 4a;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    thrombocytopenia, thrombocythemia, autoimmune diseases, organ transplantation, or bone marrow transplantation. The CD109 nucleic aci or their antisense nucleotide sequence are useful in gene therapy for treating these conditions. The present sequence represents the human CD109 K15 cDNA sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        K15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3292
```

The invention relates to isolated nucleic acid molecules encoding CD109 CC polypeptides. These nucleic acid molecules include the human cDNA CC sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variants. CC CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 cf family of thioester-containing proteins. The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid, CC CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful cor treating or detecting a disease or disorder, e.g. conditions cassociated with endothelial activation, platelet activation, activation of the complement system, quantitative or qualitative abnormalities and of the complement system, quantitative or qualitative abnormalities can of platelet function, increased or impaired platelet aggregation and confidency increased or impaired activation of the coagulation and/or CC fibrinolytic systems, or impaired or increased immune activation. These care also useful for treating cardiovascular disorders, stroke, myocardial infarction, thrombosis, embolsism, peripheral vascular disease, thrombocytopenia, thrombocythemia, autoimmune diseases, organ transplantation, or bone marrow transplantation. The CD109 nuc or their antisense nucleotide sequence are useful in gene them nucleic acids

The invention is used for negatively modulating TGF-beta activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability and increase graft success. The present sequence is a gene encoding human r150 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel transforming growth factor (TGF)-beta 1 binding reagent which comprises r150 protein which acts as accessory receptor of TGF-beta, useful for negatively modulating TGF-beta activity, and thus for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 7; Page 91-93; 127pp; English.

of the coagulation or fibrinolytic systems, activation of T lymphocytes and of the complement system, quantitative or qualitative abnormalities of platelet function, increased or impaired platelet aggregation and activation, increased or impaired activation of the coagulation and/or ribrinolytic systems, or impaired activation of the coagulation and/or are also useful for treating cardiovascular disorders, stroke, myocardial infarction, thrombosis, embolism, peripheral vascular disease, by comparing thrombocythemia, autoimmune disease, organ transplantation, or bone marrow transplantation. The CD109 nucleic acids or their antisense nucleotide sequence are useful in gene therapy for treating these conditions. The present sequence represents the human CD109 KI cDNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptides. These nucleic acid molecules include the human cDNA sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variants. CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 family of thioester-containing proteins. The CD109 polypeptides can be expressed by standard recombinant methodology. The CD109 nucleic acid,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expressed by standard recombinant methodology. The CD109 nucleic acid, CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                   for treating or detecting a disease or disorder, e.g. conditions associated with endothelial activation, platelet activation, activation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel transforming growth factor (TGF)-betal binding reagent which comprises a glycosylphosphatidyl inositol (GPI)-anchored TGF-betal binding protein referred to as r150 which acts as an accessory receptor of TGF-beta. The invention is used for negatively modulating TGF-beta activity, and thus for treating conditions characterised by overproduction of TGF-beta, such as cancer. Antisense molecules of the invention are used for increasing TGF-beta availability and increase graft success. The present sequence is a gene encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel transforming growth factor (TGF)-beta 1 binding reagent which comprises r150 protein which acts as accessory receptor of TGF-beta, useful for negatively medulating TGF-beta activity, and thus for treating cancer

```
CC polypeptides. These nucleic acid molecules include the human cDNA CC sequences comprising CD109 K1, CD109 K1-H7, CD109 K15 or their variants. CD109 is a novel member of the alpha2 macroglobulin (alpha2M)/C3, C4, C5 (amily of thioseter-containing proteins. The CD109 polypeptides can be CC expressed by standard recombinant methodology. The CD109 nucleic acid, CC CD109 polypeptide or its mimetic, or the anti-CD109 antibody is useful CC for treating or detecting a disease or disorder, e.g. conditions CC associated with endothelial activation, platelet activation, activation of the coagulation or fibrinolytic systems, activation of T lymphocytes of platelet function, increased or impaired platelet aggregation and CC activation, increased or impaired platelet aggregation and CC fibrinolytic systems, or impaired activation of the coagulation and/or CC fibrinolytic systems, or impaired activation of the coagulation. These CC are also useful for treating cardiovascular disorders, stroke, myocardial cinfarction, thrombosis, embolism, peripheral vascular disease, organ CC transplantation, or bone marrow transplantation. The CD109 nucleic acids transplantation, or bone marrow transplantation. The CD109 nucleic acids or their antisense nucleotide sequence are useful in gene therapy for CC CD109 K1 CDNA sequence.
